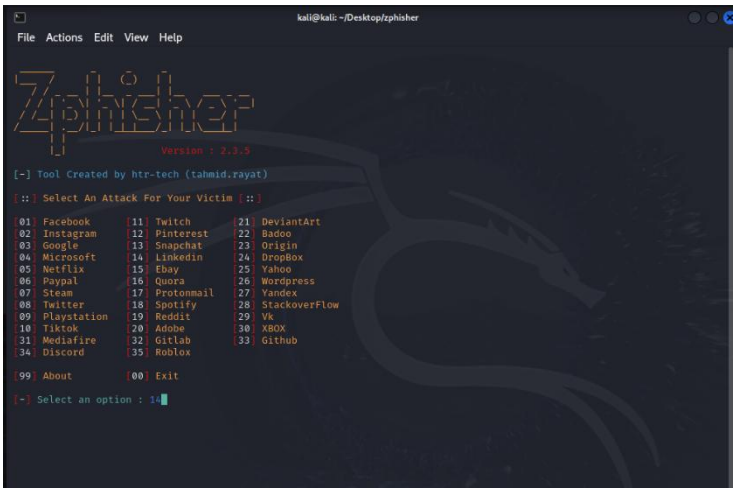
Practical 1

Practical No. 1: Fake LinkedIn Login Page for Ethical Hacking Practice

Steps-

Step1- Open the kali Linux in Vmware software and open the terminal

Step2- Then, change the directory to zphisher by" cd zphisher" and type "bash zphisher.sh" to run the zphisher tool

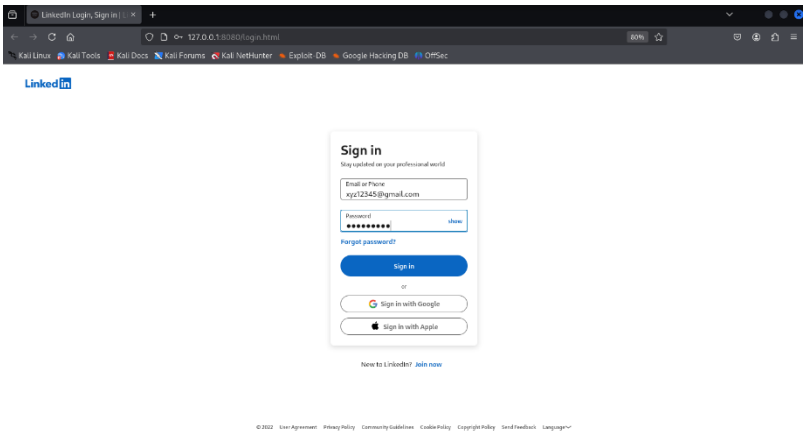


Step3- Then, Type 14 for Linkedin and then select the type of phishing page you want to create.

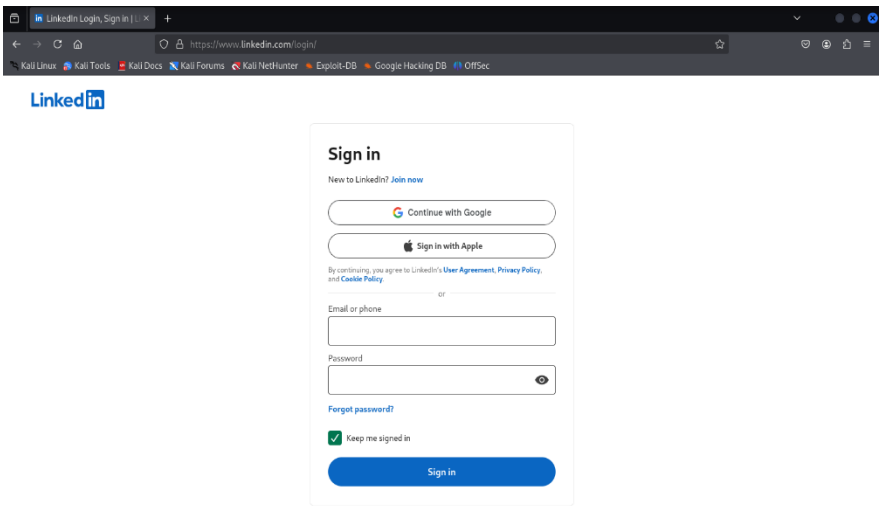
Step4- Select the host where we want to deploy the phishing page, we are now go with the localhost to deploy it on local system and select custom port then, press enter.

Step5- Now, it will give you the website link, open it on your browser.

Step6- Now, try to enter the login credentials by your username and password and click sign in



Step7- Then it will redirect you into original website



Step8- To check the Victim data go back to the terminal and you can see all details of the victim.
